

Installation instructions: Corner Shelves (1 3/8" thick)

Items included

Tools you'll need

1 Positioning

Establish and mark the shelf location on the wall.

Locate and mark the locations of the studs on both sides of the corner. If securing to wall studs is not an option, using drywall anchors, such as toggle bolts, is recommended.

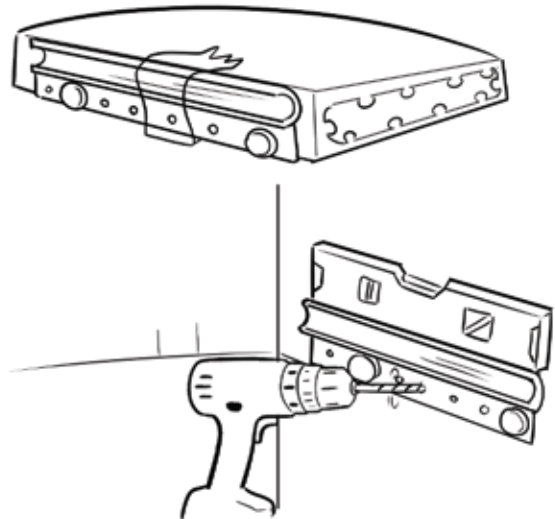

2 Install the Aluminum Track

Remove the aluminum track from the shelf it's taped to.

Using a level, position the track on the wall, leaving ~1-3" of space between the corner of the wall and the end of the track.

Use a drill, screws, and anchors, if necessary, to affix the track to the wall.

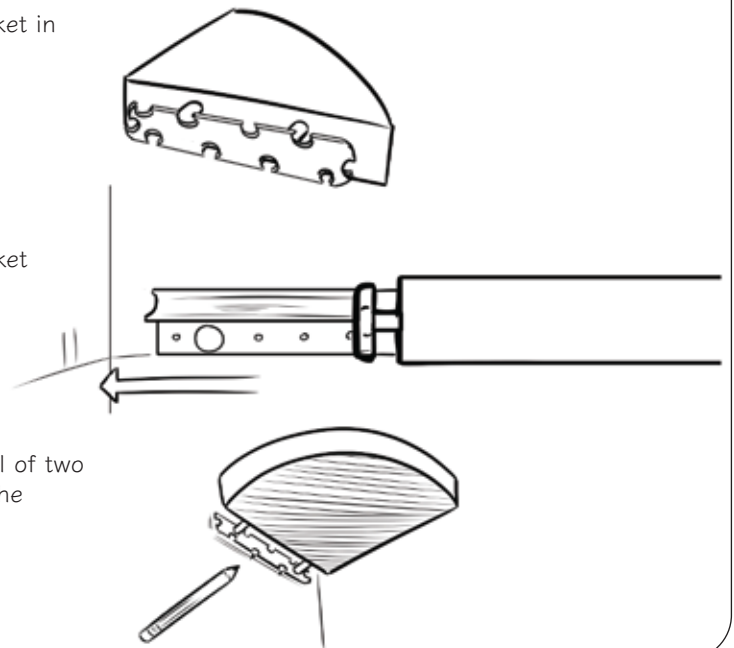

3 Align the Steel Bracket

The steel bracket is stored inside the shelf. Leave the bracket in place for this step.

Slide the shelf onto the aluminum track until the steel bracket touches the wall.

While keeping the shelf level, mark the locations on the wall of two screw holes at the bottom side of the bracket. Also, mark the edges of the bracket on the wall.

Installation instructions: Corner Shelves (1 3/8" thick)

4 Remove the Steel Bracket

Slide the shelf off of the aluminum track and remove the steel bracket.

Tips: 1) lift the bracket on both ends at the same time, 2) gently pry with two screw drivers, 3) hammer the bracket out or lift with pliers.

5 Secure the Bracket

Use a drill and screws to affix the bracket to the wall lining up the holes from step 3, starting with the bottom hole locations on the bracket. Ensure the screws sit snug against the bracket base.

Screw the top hole locations.

When dealing with non-drywall walls, pre-drilling with a 3/32 drill bit may be required. It's advisable to utilize 2-4 screws per stud, predominantly at the top of the bracket.

6 Attach the Shelf

Slide the shelf onto the bracket. It should fit snugly and might need a bit of force.

7 Adjust and Secure

If difficulties arise with fully sliding in the shelf, employ a rubber mallet or piece of wood to gently tap the shelf. Protect the shelf with a towel. Wiggle the shelf side-to-side to facilitate the process if needed.

Installation Tips

Leveling

If your shelf isn't level post-installation, consider placing a shim behind the bracket to achieve a level position.

Stability

If the shelf can move vertically, wrapping electrical tape around the bracket rods' ends might provide additional stability.
